

# Allied Waste Industries

## Selbyville Resident:

The waste removal industry is one of constant change. We have seen advancement in equipment, landfills, regulations, and the type of waste that is acceptable. One of the most important aspects of this change is the safety of our people. This is evident in our training programs, which have decreased our accidents and injuries by 87%.

Allied Waste is in the process of converting many of our routes to one-man automated operations. This will reduce the chance of helpers getting injured in the street.

If you are receiving this letter, your route has been designated for this transition. In order for this change to be effective, and to keep service costs down, we are asking our customers to follow these simple procedures:

1. All trash needs to be inside our container with the lid closed.
2. Our container should be placed curbside at least 3 feet from all obstructions (trees, cars, mailboxes, etc.)
3. Containers must be placed with the front facing the street, sitting on the sidewalk, or within 2 feet of the curb.
4. Containers need to be curbside by 7am on your scheduled service day.
5. Allied Waste will not pick up anything that is outside the container.

Should you have any questions or concerns, or need to request an additional container, please feel free to call our office at 800-762-8888.
